

MUHAMMAD WAQAR

Frontend Software Engineer (React.js)

mwaqar7615@gmail.com | +92-311-5119984 | Khanewal, Punjab, Pakistan

[Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Frontend-focused Software Engineer with hands-on production experience building responsive React.js applications, from component architecture and state management to REST API integration and animated, accessible UI. Comfortable owning a UI feature end-to-end across e-commerce, marketplace, and booking-platform codebases, with a track record of resolving real-world bugs such as race conditions, dependency-array issues, and role-based access flows. Works regularly with AI coding assistants as part of a daily development workflow, using them to debug, scaffold, and research while verifying all output manually through DevTools, console testing, and Git.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, React Router, Redux, Context API, Component Architecture

Styling & Layout: Tailwind CSS, SCSS/Sass (BEM), Bootstrap, CSS Grid, Flexbox, Responsive/Mobile-First Design

Animation & Interactivity: Framer Motion, Canvas API + requestAnimationFrame, CSS Keyframes, Swiper.js

Forms & Validation: Controlled Forms, Formik, React Hook Form, Yup, Accessible Focus States

APIs & Integrations: REST APIs (Axios, fetch), Firebase/Firestore, Stripe Elements, Mapbox/Google Places, iCal Feeds

UI Libraries: Material UI, Chakra UI, shadcn/ui, react-icons, lucide-react

Accessibility & SEO: ARIA Attributes, Keyboard Navigation, On-Page SEO

DevOps / Tools: Vite, npm, Git, GitHub, Vercel, Netlify, VS Code, Chrome/Firefox DevTools, Ubuntu Linux, SSH

Concepts: Role-Based UI, SPA, Reusable Component Patterns, Figma-to-Code, Agile Collaboration

AI-Assisted Development: ChatGPT, Claude, Gemini, GitHub Copilot, DeepSeek, Grok, OpenAI Codex, Qwen — used for debugging, scaffolding, and research; output verified via DevTools and Git before commit

Programming Fundamentals: C, C++, Java (OOP, Data Structures & Algorithms), Python — introductory coursework level

WORK EXPERIENCE

Front-End Developer | Bloggers Bracket · Bahawalpur, PK

2025 – Present

- Develop responsive, user-friendly interfaces in React.js for multiple client and company projects.
- Collaborate with backend developers on REST API integration and data flow for production features.
- Convert project requirements and Figma designs into functional, pixel-accurate frontend solutions.
- Build reusable, maintainable UI components and help keep the codebase scalable as features grow.
- Participate in debugging, testing, and deployment, including resolving build and Vite-related issues.
- Use AI coding assistants alongside DevTools and Git to speed up debugging and routine development tasks.

KEY PROJECTS

Personal Developer Portfolio

React · Vite · Tailwind CSS · SCSS (BEM) · Framer Motion

- Designed and built a dark, glassmorphic portfolio UI from scratch, including an animated Navbar/Hero redesign.
- Built a hand-coded canvas cursor component (particle trail and sparkle effects) and an animated, icon-based Skills grid covering 19 technologies.
- Refactored a prop-drilled Sidebar/Navbar setup into a single self-contained component with a clip-path reveal transition.
- Implemented on-page SEO (meta tags, favicon, title/description) and resolved responsive layout issues across breakpoints.

Crafts & Delights — Multi-Vendor E-commerce Platform

React · Tailwind CSS · Stripe

- Built role-based frontend views for admin, vendor, and customer user types within a single React application.
- Diagnosed and fixed multiple checkout bugs: a useEffect dependency-array infinite loop (resolved with useMemo), a shop-location fetch race condition on first page load, and a delivery-distance fallback bug.
- Implemented Stripe-based payment UI and a restyled, theme-consistent confirmation/alert component.
- Set up the Vite static-asset and favicon pipeline (assets in public/, SVG favicon with correct xmlns/type).

WorkNexus — Office Management & Team Communication Platform

React.js

- Contributed as a frontend developer to WorkNexus, a Slack-style platform combining office/workplace management with an integrated real-time team chat system.
- Built reusable React components and implemented responsive layouts across the platform's interface.
- Assisted with frontend architecture and UI implementation, helping maintain consistency and usability across modules.

Property & Activity Booking Marketplace Dashboard

React · Tailwind CSS · Framer Motion · Mapbox · Stripe

- Built admin and superadmin dashboard views with role-based navigation, filterable/paginated tables, and a multi-step bulk-sync wizard (review, confirmation, and success states).
- Integrated Mapbox location autocomplete and a custom distance-calculation utility to power radius-based property search.
- Rendered multi-platform iCal calendar feeds (e.g. Airbnb) as interactive booking-calendar events with hover tooltips.
- Added accessible keyboard navigation to search dropdowns and fixed responsive issues (mobile sidebar height, tooltip placement, flickering table data).

Bakery E-commerce Website

React · React Router · Redux

- Built a multi-page storefront (home, login, admin) with React Router and a Redux store with persisted state.
- Implemented an admin theme-customization panel allowing users to personalize site appearance, with preferences saved via localStorage.

Figma-to-React Landing Pages

React · TypeScript · Tailwind CSS

- Converted Figma designs into pixel-perfect, fully responsive landing page components, including a multi-section retreat/wellness landing page with custom typography (Inter, Playfair).

EDUCATION

Bachelor of Science in Computer Science

2022 – 2026

Islamia University Bahawalpur, Baghdad Campus, Pakistan

- Coursework covered programming fundamentals in C, C++, and Java (including Object-Oriented Programming and Data Structures & Algorithms), and Python — all at an introductory level.
- Developed JavaScript skills well beyond coursework level through independent project work, including building production-style React.js applications.

Final Year Project (FYP): Full-Stack Web Application

React.js · Express.js · MongoDB

- Designed and built the complete frontend in React.js, covering component architecture, state management, and routing.
- Integrated the frontend with an Express.js/MongoDB REST API backend that was AI-generated, adapting and debugging the generated endpoints to match frontend data requirements.
